

Piper PA-39 Twin Comanche

110,000.00 EUR

ASI Germany is proud to present this 1970 Piper PA-39 Twin Comanche, the Twin Comanche is one of the most fuel-efficient, practical and cost-effective light twins on the market. The Twin Comanche is a staple of twin engine training and a great starting point for pilots and owners wishing to add an extra layer of safety and comfort with a second engine. The PA-39 model signifies the addition of counter-rotating propellers, reducing torque effects on takeoff and allowing the aircraft to operate with ease.

This Twin Comanche is equipped with the optional STC for tip tanks, this allows an additional 30 US Gallons of fuel to add an impressive range to the already stout offering. With an updated leather interior and a striking paint scheme, this aircraft is ready to be the pride of your hangar!
